

SOFexchange – SMART LAYTIME EVENTS®

Osiris announces that introduction **SMART LAYTIME EVENTS®**. This unique feature makes the Masters task of creating a Statement of Facts(SOF) even easier. In many cases, the SOF can be fully completed with no typing whatsoever.

SMART LAYTIME EVENTS® are available to any invited person or company who is responsible for creating the SOF at the port. This includes the Master, Port Agent, Surveyors, Harbour Master, etc.

How it works

With **SOFexchange** Masters, Captains and Port Agents can enter events during a vessel’s stay in port in a standard form, which can be viewed by all relevant parties in real time. Ship Owners, Charterers and Traders can then access the SOF in any format they choose. The Notice of Readiness can be uploaded to the application, and for any disagreements with the recorded SOF a Letter of Protest can be also uploaded to a common location.

With **SMART LAYTIME EVENTS®**, the **SOFexchange** system understands what events have taken place so far, and hence can suggest the most likely events that could happen now. The system understand different port operations and different cargoes. It only suggest events applicable to the current SOF.

The **SOFeXchange** application can run through any standard web browser. Custom iPhone, iPad and Android apps are in the pipeline. Entering a port call event is now even quicker than the previous version of **SOFeXchange**. For some port calls it is even possible to have a complete SOF with no typing required at all.
